

LEARNING IN THE LIMELIGHT

@Ruskin

This week in DT ..

Year 10 Hospitality and Catering students have been making Swiss Rolls in our new specialist food room. They have been looking in particular at the knowledge required to be able to use the aeration technique to produce a light and fluffy sponge.

Year 9 are working through the Ideate section of their project. The context of the project is to design and prototype a piece of wearable technology for an athlete.

The core knowledge this week has covered the crating technique to sketch in 3D. You can clearly see this in use when looking at their designs.

Year 8 have been working on their 'Bag for Life' project. They have started their practical lessons, manufacturing a bag from re-used materials.

The core knowledge this week relates to textile construction and textile manufacture.

Learning Together. Achieving High Standards.
